CONTENTS OF VOLUME 2

NUMBER 1, SEPTEMBER 1972

WILLIAM STILLWELL, GARY STEINMAN, AND RICHARD L. MCCARL. Phosphorylation of Glucose Mediated by Imidazole-Containing Catalysts	1
MORTON J. GIBIAN AND JAMES A. RYND. Oxidation of Pyruvic Acid by Flavins in the Presence of Amines	11
MIKLOS ¹ BODANSZKY, YAKIR S. KLAUSNER, AND VIKTOR MUTT. Synthesis of the Vasoactive Intestinal Peptide (VIP). I. The C-Terminal Cyanogen Bromide Fragment	30
WALTER T. SMITH, JR. AND THOMAS L. HEARN. Substituent Effects in 2-Pyridone-Catalyzed Mutarotation	39
F. J. RYAN, R. A. BAMBARA, AND P. A. LOACH. Structure of Porphyrins in Relation to Reversible Oxidation and Reduction Reactions	44
D. LAVIE, E. C. LEVY, AND R. ZELNIK. The Constituents of <i>Carapa guianensis</i> Aubl. and their Biogenetic Relationship	59
R. L. RODIN AND J. KOVACS. Synthesis and Conformational Studies of Poly- β -(γ -glutamyl)-aspartic Acid	65
WILLIAM GIBB AND JONATHAN JEFFERY. The Different Effects of an Epoxy and a Methylene Group on Enzymic Reductions of a Vicinal Oxo Group	73
ICKSAM NOH AND FUN SUN CHU. Interaction of Aflatoxin B ₁ With Electron-Donating Organic Molecules, Including Aromatic Amino Acids	77
YAKIR S. KLAUSNER, VIKTOR MUTT, AND MIKLOS BODANSZKY. Synthesis of Vasoactive Intestinal Peptide (VIP). II. The N-Terminal Hexapeptide	87
COMMUNICATION	
J. P. FERRIS, D. B. DONNER, AND W. LOTZ. The Possible Role of HCN in the Origins of Life. The Oligomerization of HCN and the Reaction of HCN with N-Alkyliminoacetonitriles	95

NUMBER 2, JANUARY 1973

ROY A. JOHNSON, CHARLES M. HALL, WILLIAM C. KRUEGER, AND HERBERT C. MURRAY. Microbial Oxygenation of Dialkylbenzenes	99
FRANCIS SCHUBER AND B. BELLEAU. Solvent and Solute Effects on "Inside-Outside" Conformations and Rotation About the Peptide Bond in a Miniature Protein Model	111
A. I. SCOTT, L. ZAMIR, G. T. PHILLIPS, AND M. YALPANI. The Biosynthesis of Patulin	124
JACK M. GEORGE, JAMES C. ORR, A. G. C. RENWICK, PRISCILLA CARTER, AND LEWIS L. ENGEL. The Stereochemistry of Hydrogen Transfer to NADP ⁺ by Enzymes Acting upon Stereoisomeric Substrates	140
SHINNICHIRO SUZUKI, TADAYOSHI HIGASHIYAMA, AND AKITSUGU NAKAHARA. Nonezymatic Hydrolysis Reactions of Adenosine 5'-Triphosphate and Its Related Compounds. I. Hydrolysis Reactions of ATP with Some Continuous-Chain Polyamines	145
D. DOLPHIN. On Corrin Biosynthesis	155
J. D. WHITE, DENNIS W. PERKINS, AND SIMEON I. TAYLOR. Biosynthesis of Ergosta-4,6,8(14),22-tetraen-3-one. A Novel Oxygenative Pathway	163
COMMUNICATION	
A. S. WIDMAN, A. H. SOLOWAY, R. L. STERN, AND M. M. BURSEY. Lack of Exchange of the Phenolic Function in the Enzymatic Conversion of <i>p</i> -Hydroxyphenylpyruvate to Homogentisate	176
REVIEW	
EPHRAIM F. KORMAN AND JEROME McLICK. Stereochemical Reaction Mechanism Formulations for Enzyme-Catalyzed Pyrophosphate Hydrolysis, ATP Hydrolysis, and ATP Synthesis	179

NUMBER 3, MAY 1973

W. S. POWELL AND R. A. HEACOCK. The Interaction of Adrenochrome with Some Thiol-Containing Amino Acids. Isolation of Some Products	191
LEODIS DAVIS. The Structure of Dihydroxyacetone in Solution	197
MOSHE M. WERBER AND YECHIEL SHALITIN. The Reaction of Tertiary Amino Alcohols with Active Esters. I. Acylation and Deacylation Steps	202
MOSHE M. WERBER AND YECHIEL SHALITIN. The Reaction of Amino Alcohols with Active Esters. II. Catalysis of the Acylation Step by Metal Ions.....	221
PATRICIA DUNLOP, MARIO A. MARINI, HENRY M. FALES, EDWARD SOKOLOSKI, AND CHARLES J. MARTIN. NMR Studies of the Reaction of Formaldehyde with the Imidazole Side Chain of Histidine: A Reactive Amino Acid in Enzyme Catalysis	235
KENN E. HARDING. On the Stereochemistry of Biogenetic-Like Olefin Cyclizations	248
R. J. HARRIS AND R. H. SYMONS. On the Molecular Mechanism of Action of Certain Substrates and Inhibitors of Ribosomal Peptidyl Transferase	266
R. J. HARRIS AND R. H. SYMONS. A Detailed Model of the Active Centre of <i>Escherichia coli</i> Peptidyl Transferase	286

NUMBER 4, SEPTEMBER 1973

U. K. PANDIT, J. B. STEEVENS, AND F. R. MAS CABRÉ. NADH Models. II. Mechanism of Reduction of Electrophilic Olefins with 3,5-Diethoxycarbonyl-2,6-Dimethyl-1,4-Dihydropyridine	293
JENNY PICKWORTH GLUSKER AND PAUL A. SRERE. Citrate Enzyme Substrates and Inhibitors: Depiction of their Absolute Configurations.....	301
LEONARD B. SPECTOR. Covalent Enzyme-Substrate Intermediates in Transferase Reactions	311
M. S. POONIAN, E. F. NOWOSWIAT, L. TOBIAS, AND A. L. NUSSBAUM. Chemical Synthesis of a Tetradecamer in the Deoxyribonucleic Acid Series	322
R. H. PRINCE AND P. R. WOOLLEY. On the Mechanism of Action of Carbonic Anhydrase	337

YAKIR S. KLAUSNER, CYNTHIA YANG LIN, VIKTOR MUTT, AND MIKLOS BODANSZKY. Synthesis of the Vasoactive Intestinal Peptide (VIP). III. The Sequence 7-13	345
YAKIR S. KLAUSNER AND MIKLOS BODANSZKY. Synthesis of the Vasoactive Intestinal Peptide (VIP). IV. The Sequence 14-28	354
D. H. R. BARTON, J. E. T. CORRIE, (MRS.) P. J. MARSHALL, AND D. A. WIDDOW- SON. Biosynthesis of Terpenes and Steroids. VII. Unified Scheme for the Biosynthesis of Ergosterol in <i>Saccharomyces cerevisiae</i>	363
AUTHOR INDEX	374
SUBJECT INDEX.....	375

Information for Authors

Bioorganic Chemistry: An International Journal publishes accounts of research on the organic and physical organic chemistry of biological or biologically related reactions. Within this context, manuscripts treating the following topics are suitable for submission:

New enzymic reactions in which the chemistry is apparent by way of starting material and product structures; the elucidation of enzyme reaction mechanisms from the physical organic standpoint; the isolation and structure determination of new natural products which have implications for basic biological reactions; biogenetic-type organic synthesis, in which there are executed non-enzymic reactions based upon substrate behavior in biological processes; the synthesis and behavior of model enzymes; the molecular structure and chemical behavior of enzymes; prebiotic and evolutionary organic chemistry; the chemistry of biopolymers; molecular pharmacology.

Regular articles must feature novel, unpublished material or represent full accounts of findings published earlier in preliminary form. Contributions may be either experimentally oriented or entirely theoretical. Articles that are sensibly speculative or constitute new interpretations of older findings are appropriate. Although there is no provision for expedited publication of preliminary disclosures, the editors will consider manuscripts which feature significant new results, described briefly and without a separate experimental section.

Reviews containing apposite subject material are welcome. An acceptable review may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or presentation of earlier findings is especially suitable. Announcements of meetings, new books, or other developments of interest to the bioorganic chemist will be printed upon request. Manuscripts are considered for publication on the proviso that they have not been, nor will be, published elsewhere.

Address all submitted manuscripts and correspondence to:

Dr. Eugene E. van Tamelen
Editor, *Bioorganic Chemistry*
Department of Chemistry
Stanford University
Stanford, California 94305.

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (preferably in English) in triplicate, including the original typewritten copy, with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction by the photo-engraver. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of 8½ × 11-in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), and an address to which proof should be mailed. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm ; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg ; nanogram, ng; milliliter, ml; microliter, μl ; molar, M; millimolar, mM; micromolar, μM ; normal, N; millicurie, mCi; microcurie, μCi ; counts per minute or second, count/min or count/sec; disintegrations per minute or second, dpm or dps; centigrade, °C; seconds, sec; minutes,

min; hours, hr; standard deviations, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, nmr; infrared, ir; ultraviolet, uv; number, No.; Ångstrom units, Å; cycles per second, cps; parts per million, ppm; equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the text; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than 8.5×11 in., with coordinates properly labeled; grid lines that are to show in the engraving should be inked in black. Original drawings no larger than $8\frac{1}{2} \times 11$ in. (21×27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be engraved directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order—i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to Chemical Abstracts' *Service Source Index* for styling of journal titles):

1. L. G. LONGSWORTH, R. K. CANNAN, AND D. A. MACINNES, *J. Amer. Chem. Soc.* **62**, 2580 (1940).
2. R. B. WOODWARD AND R. HOFFMANN, "The Conservation of Orbital Symmetry," 2nd ed., Vol. 1, pp. 15–20. Academic Press, New York, 1970.
3. L. G. LONGSWORTH, "Electrophoresis" (M. Bier, Ed.). Academic Press, New York, 1969.

Galley proofs will be sent to the senior author. Authors will be charged for alterations in excess of 10% of the cost of composition.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs. There are no publication charges.

Cephalosporins and Penicillins

Chemistry and Biology

Edited by EDWIN H. FLYNN

*Eli Lilly and Company
Indianapolis, Indiana*

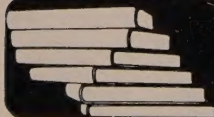

This monograph presents detailed discussions of biological, physico-chemical, and organo-chemical studies of the cephalosporins — an important new group of antibiotics — as well as pertinent data on the penicillins. An introductory chapter by Professor Abraham, who discovered the cephalosporins, outlines their history and describes degradation procedures which led to the structure of cephalosporin C.

The rest of the chapters deal with virtually all biological, organo-chemical, and physico-chemical aspects of the cephalosporins. Features of the book include:

- Detailed discussions of the biosynthesis, mode of action, β -lactamases, allergenic potential, pharmacology, and toxicology of all cephalosporin compounds now in use
- Laboratory evaluations of antibiotics as anti-infectives and structure-activity relationships
- Extensive treatment of the chemical reactions of the β -lactam-dihydrothiazine system with special attention to its relationship to the β -lactam-thiazolidine
- Discussions of the total synthesis of cephalosporins
- A theoretical treatment of UV absorption, CD measurements, and NMR spectra
- Stereo projections of structures of important compounds and graphic illustration of many NMR spectra
- Structures determined by X-ray methods and their biological implications
- Useful compilations of physico-chemical data
